

Example Three of How a Monthly Medicare Prescription Payment Plan Bill Is Calculated

You pay \$4 every month in out-of-pocket costs for a prescription you use regularly. In April 2025, you need a new one-time prescription that costs \$613. This means your total out-of-pocket costs in April are \$617. That same month, before you fill your prescriptions, you join the Medicare Prescription Payment Plan through your Arkansas Blue Medicare plan with drug coverage.

We calculate your first month's bill in the Medicare Prescription Payment Plan differently than your bill for the rest of the months in the year:

- First, we figure out your "maximum possible payment" for the first month:

\$2,000 (annual out-of-pocket maximum) -\$12 (your out-of-pocket costs before using this payment option) = \$1,988	=	\$220.89 (your "maximum possible payment" for the first month)
9 (remaining months in the year)		

- Then, we figure out what you'll pay for April:
 - Compare your total out-of-pocket costs for April (\$617) to the "maximum possible payment" we just calculated: \$220.89.
 - We'll bill you the lesser of the two amounts. So, you'll pay \$220.89 for the month of April.
 - You have a remaining balance of \$396.11 (\$617 – \$220.89).

For May and the rest of the months left in the year, we calculate your payment differently:

\$396.11 (remaining balance) + \$4 (new costs) = \$400.11	=	\$50.01 (your payment for May)
8 (remaining months in the year)		

Your payments will vary throughout the year. That's because you're adding drug costs during the year, but you have fewer months left in the year to spread your payments across.

By the end of the year, you'll never pay more than:

- The total amount you would have paid out-of-pocket.
- The total annual out-of-pocket maximum (\$2,000 in 2025).

Remember, this is just your monthly payment for your out-of-pocket drug costs. You still need to pay your plan premium (if you have one) each month.

Here's a month-by-month look:

Month	Your drug costs (without Medicare Prescription Payment Plan)	Your monthly payment (with Medicare Prescription Payment Plan)	Notes
January	\$4	\$4*	*You made these payments directly to the pharmacy before you started participating in the Medicare Prescription Payment Plan.
February	\$4	\$4*	
March	\$4	\$4*	
April	\$617	\$220.89	This is when you start participating in the Medicare Prescription Payment Plan. Remember, your first month's bill is based on the "maximum possible payment" calculation. We calculate your bill for the rest of the months in the year differently.
May	\$4	\$50.01	
June	\$4	\$50.59	
July	\$124	\$71.25	This month, you need a drug that's \$120, in addition to your \$4 drug. Using the same formula we used in May, your payments increase because you're adding drug costs during the year, but you have fewer months left in the year to spread your payments across.
August	\$4	\$72.05	
September	\$4	\$73.05	
October	\$124	\$114.39	This month, you need a drug that's \$120, in addition to your \$4 drug. Using the same formula we used in May and July, your payments increase because you're adding drug costs during the year, but you have fewer months left in the year to spread your payments across.
November	\$4	\$116.39	
December	\$4	\$120.38	
Total	\$901	\$901	You'll pay the same total amount for the year, even if you don't use the Medicare Prescription Payment Plan.

If you're worried about paying \$617 in April, the Medicare Prescription Payment Plan will help you spread your costs across monthly payments that vary throughout the year. If you're worried about higher payments later in the year, the Medicare Prescription Payment Plan might not be right for you. Call us if you need any help.
