

# Frequently used Codes for HEDIS® measures

CPT II and ICD 10 codes make it easier to track quality of care. The codes also simplify how quality performance measures are reported and eliminate the need for chart abstraction. Providers and hospitals can use these codes to report specific services that contribute to positive health outcomes and high-quality care.

## Why use CPT II and diagnosis codes?

- Supply more accurate medical data and decrease requests for members' record to review
- Identify and close gaps in care more accurately and quickly – this drives HEDIS®
- Supports a proactive approach to addressing clinical care opportunities

Listed are HEDIS® measures and applicable codes.
